MUSTANG T-Band Applications For Improved Sugar Beet Stands MAXX INSECTICIDE

Take an integrated approach to protecting sugar beet stands

This trial was conducted in 2011 at St. Louis, Michigan, by Michigan Sugar Co. The objective was to compare various insecticide + fungicide treatments upon sugar beet stand. Treatments were applied in 10 gallons of water in a 3.5 inch T-band at planting. At 89 days, the Mustang[®] Maxx insecticide 4 oz./acre + Quadris[®] fungicide 7.1 oz./acre treatment had the highest sugar beet stand count.

Plants/100 ft. - 89 Days After Treatment

Inside This Issue

□ T-Band Applications for Improved Sugar Beet Stands.

□ Maximizing At-Plant Insecticide + Fungicide Applications to Sugar Beets.

Maximizing At-Plant Insecticide + Fungicide Applications to Sugar Beets

1. Apply Mustang Maxx insecticide 4 oz./acre in a 3.5 inch T-band in at least 10 gallons of spray.
2. Apply Quadris fungicide 7.1 oz./acre in a 3.5 inch T-band in at least 10 gallons of spray.
3. To prevent screen and spray nozzle clogging:
 - A. Pre-slurry Quadris fungicide thoroughly before adding to tank, which is at least half full of water
 - B. Use slight to moderate agitation. DO NOT use vigorous agitation.
 - C. Pre-slurry Mustang Maxx insecticide
 - D. Be sure Quadris fungicide is thoroughly dispersed before adding pre-slurried Mustang Maxx insecticide
 - E. Maintain moderate agitation through application and planting
 - F. Mix only what will be needed for the day. Try to avoid storing Quadris fungicide mixtures overnight.
 - G. A 50 mesh screen or courser is recommended between pump and boom or at the nozzle. It is suggested that an extra set of screens be available to rotate as one set is being soaked and cleaned daily.
