Count on FMC for early-season and long-lasting peach twig borer control.

Almonds

Altacor® insect control powered by Rynaxypyr® active applied delayed dormant or at bloom provides effective control of peach twig borers (PTB). Local research has shown that delayed-dormant or at-bloom applications control overwintering PTB larvae that can bore into shoots early in the season and kill off the tips.

Key benefits of Altacor insect control:

- Excellent knockdown and long-lasting residual control of PTB.
- Compatible with most commonly used early-season fungicides.
- An excellent environmental profile.
- Shortest field re-entry interval.
- No label bee restrictions.*

Field studies conducted at labeled rates of 3-4 oz./A showcase the long-lasting residual control of Altacor insect control on PTB from delayed-dormant bloom or bloom applications.

* In line with integrated pest management and good agricultural practices, insecticide applications should be made when pollinators are not foraging to avoid unnecessary exposure.

For more information, contact your local FMC retailer or representative about Altacor insect control from FMC and visit us at FMCCrop.com.
