FOR DISTRIBUTION AND USE ONLY IN WASHINGTON, IDAHO, OREGON & MONTANA

IT IS A VIOLATION OF FEDERAL LAW TO USE THIS PRODUCT IN A MANNER INCONSISTENT WITH ITS LABELING

CROPS	PEST	Anthem® Flex Herbicide Use Rate by Soil Texture			
		Timing	Coarse (fluid oz.)	Medium (fluid oz.)	Fine (fluid oz.)
Wheat Winter and Spring Wheat	Weeds Listed on the Anthem Flex Herbicide Label	Pre-plant	Do Not Apply	2.75-3.5	3.5-4.5
		Post plant Pre-emerge	Do Not Apply	2.75-3.5	3.5-4.5
		Delayed Pre-emerge	2.0-2.7	2.75-3.5	3.5-4.5
		Post emerge	2.0-2.7	2.75-3.5	2.7-4.5

Specific Spring and Winter Wheat Use Directions and Precautions

- Rainfall and/or irrigation totaling at least 0.5 inches prior to weed emergence may be necessary for herbicide activation and optimum weed control. If no rain occurs within 7 days after application, apply overhead irrigation if available, at 0.5 to 0.75 inch total volume. Use a maximum of 0.5 inches on coarse textured soils and 11.0 inches on medium and fine textured soils.
- Excessive rainfall or prolonged wet soil conditions after application of ANTHEM FLEX from seed germination through seedling emergence may increase the risk of wheat seedling injury and should be avoided if possible.
- To reduce the risk of adverse crop response only apply pre-plant or pre-emergence to soils with a CEC greater than 15, pH less than 7.5, and soils with an organic matter content greater than 2%. If these conditions are not met, ANTHEM FLEX must be applied as a delayed pre-emerge application or post emerge application.
- Apply delayed pre-emerge applications as a broadcast spray to the soil surface following wheat planting when 80% of the germinated wheat seeds have a shoot at least ½ inch long until wheat spiking.
- Before applying to wheat, verification of ANTHEM FLEX selectivity on your variety must be confirmed to avoid injury to sensitive varieties. Check with local Cooperative Extension agent for information on potential ANTHEM FLEX varietal sensitivity. If variety tolerance is unknown, such as new varieties, apply ANTHEM FLEX to a small area to confirm varietal safety before using on a large acreage.

ALL APPLICABLE DIRECTIONS, RESTRICTIONS, AND PRECAUTIONS ON THE EPA REGISTERED ANTHEM FLEX HERBICIDE LABEL (EPA REG. NO. 279-3464) AND PRODUCTS USED IN TANK MIXES WITH ANTHEM FLEX HERBICIDE MUST BE FOLLOWED.
