**Grape Disease Control Portfolio**

Four FRAC Modes of Action to Build Your Seasonal Grape Disease Protection Program Around

**Early- to Mid-Season Fungicides**

### Koverall® Fungicide Key Attributes
- Multisite, broad spectrum
- Preventive, contact activity
- Excellent tank mix partner for IPM & resistance management due to protectant qualities.
- Excellent for early season black rot and phomopsis protection especially in combination with systemic fungicides.

### Application Recommendations
- Begin application at 0.5” to 1.5” shoot growth. Repeat at 3-5” then 8-10” shoot length.
- Combine with a systemic and/or residual fungicide for forward protectant activity.
- Choose spray volume to ensure complete coverage.

#### Koverall® Fungicide

- **Active Ingredient:** mancozeb
- **FRAC Group:** M3
- **Labeled Diseases:** Black rot, Bunch rot, Phomopsis, Downy mildew
- **Use Rate:** 1.5 – 4 lbs./A (east of Rocky Mts.)
- **Maximum Use Per Acre Per Season:** 24 lbs. Koverall fungicide (18 lbs. ai/A mancozeb)
- **PHI:** 66 days

#### Sovran® Fungicide

- **Active Ingredient:** kresoxim-methyl
- **FRAC Group:** 11
- **Labeled Diseases:** Powdery mildew, Black rot, Phomopsis cane and leaf spot, Downy mildew, Botrytis bunch rot (suppression)
- **Use Rate:** 3.2 – 6.4 oz./A
- **Maximum Use Per Acre Per Season:** 25.6 oz./A
- **PHI:** 14 days

### Sovran® Fungicide Key Attributes
- Excellent crop tolerance.
- Excellent early season tank mix partner with Koverall fungicide for black rot and phomopsis control.
- Very good tank mix partner in combination with other labeled fungicides for downy mildew control and to aid in botrytis bunch rot suppression.

### Application Recommendations
- Begin applications at bud break and continue using a 14-day interval.
- Use with organosilicon surfactants may cause temporary, cosmetic and short term injury to newly emerging leaves.

**Rhyme™ Fungicide Key Attributes**

- Superior triazole fungicide with top of class, highly systemic properties. Moves to growing points combined with long residual control.
- Excellent crop safety on Concord grapes.
- Single active ingredient for ease of tank mixing with other fungicides such as downy mildew fungicides or SDHI fungicides for broader spectrum and resistance management.

**Application Recommendations**

- Begin application at 6-10” shoot growth for powdery mildew control.
- Rotate with another non-Group 3 fungicide for resistance management.
- Use a 14 to 21 day retreatment interval for heavy and light disease pressure, respectively.

**Topguard® EQ Fungicide Key Attributes**

- Perfect combination of 2 systemic active ingredients.
- Ratio is optimized based on key attributes of each active ingredient.
- Combination is perfect for black rot and early season powdery mildew control.

**Application Recommendations**

- For black rot control, begin application at 0.5” to 1.5” shoot growth. Repeat at 3-5” and then 8-10” shoot length.
- Combined with Koverall fungicide early for premium protectant and systemic control with long lasting residual.
- Use adequate spray volume to ensure complete coverage.
- Avoid use in proximity to apples due to phytotoxicity concerns due to azoxystrobin component.
**Active Ingredient**  BLAD protein

**FRAC Group:** BM01

**Labeled Diseases:**
- Botrytis gray mold
- Powdery mildew
- Sour rot suppression (2ee label)

**Use Rate:**
- 20.5 – 36.6 fl. oz./A
- (0.34 – 0.6 lbs ai/A)

**Maximum Use Per Acre Per Season:**
- 183 fl. oz./A
- (3 lb ai/A)

**PHI:** 1 day

---

**Fracture® Fungicide Key Attributes**
- Biological, multi-site mode of action.
- Preventive and protectant activity.
- Best use in a rotational program with other botrytis fungicides.
- Quick rainfastness with 2 to 4 hours drying time.

**Application Recommendations**
- Non-systemic protectant; therefore, thorough spray coverage is necessary for optimum control.
- Use of a nonionic surfactant will aid in coverage.
- Botrytis gray mold – Begin applications when conditions favor disease development. Typically at early bloom, prior to bunch closure and during veraison and ripening.
- Sour rot (2ee label for suppression) – Begin applications at veraison or 8 to 14% sugar concentration.
- Research has shown Fracture fungicide tank mix combinations with Mustang® Maxx insecticide are effective in reducing insect injury which acts as entry points for botrytis and sour rot infections.
