Combining the FMC Herbicide Portfolio for Wheat

The acquisition of several cereal herbicide brands in Nov. 2017 presented FMC with some interesting new opportunities for cereal weed control complementary with Anthem® Flex herbicide. There products include Harmony® Extra SG herbicide and FirstShot® SG burndown herbicide.

BENEFITS AND FEATURES OF FMC WHEAT HERBICIDES

1. Application flexibility
   a. Anthem Flex herbicide may be applied PRE\(^1\), delayed PRE or POST up to the fourth tiller growth stage.
   b. Harmony Extra SG herbicide may be applied preplant burndown, or postemergence (POST) after 2-leaf but before flag leaf is visible.
   c. FirstShot SG is a burndown herbicide with a 0-day plant to wheat.
   d. All herbicides can be tank-mixed to broaden weed control spectrum.

2. Multiple modes of action. Use of these herbicides incorporates Group 2, 14 and 15 modes of action into your wheat production system.

3. Complementary weed control
   a. FirstShot SG burndown herbicide and Harmony Extra SG herbicide broaden spectrum of winter annual weed control when paired with Anthem Flex herbicide.
   b. Anthem Flex herbicide aids in management of ALS-resistant weeds.
   c. Provides control or suppression of tough winter grasses such as Italian or annual ryegrass, annual bluegrass and brome species.
