

HatchTrakSM

THE COST EFFECTIVE MULTI-PEST SOLUTION FOR SUGAR BEETS, WHEAT, BARLEY, AND ALFALFA

Why Continue with Mustang[®] Maxx Insecticide?

- Proven performance over many years
- Full service & support
 - Long-standing leader in foliar insecticide market.
 - BASF new to the foliar insecticide segment
- Benefits (broad spectrum, residual, etc) superior to FASTAC[®] EC insecticide
- Brand awareness from promotions, programs & advertising help pull-through demand
- Warning vs. Danger signal word
- FASTAC EC insecticide has limitations on number of applications per cutting on alfalfa at maximum labeled rates
- Fastac EC insecticide label prohibits using any other cypermethrin containing product on the crop once Fastac EC insecticide has been applied, eliminating Stallion[®] Brand insecticide and Mustang Maxx insecticide applications

Mustang Maxx Insecticide vs. FASTAC EC Insecticide

Category	Mustang Maxx Insecticide	FASTAC EC Insecticide
Active	Zeta-cypermethrin	Alpha-cypermethrin
Use Rates	2.24 – 4.0 oz./A	2.2 – 3.8 oz./A
Signal Word	Warning	Danger
Crops	Full label	Excludes: non-grass animal feed, grass/hay, oilseeds and several TF&V crops. Not labeled on barley. May only be applied once per cutting at full rate in alfalfa. Not labeled in-furrow on sugar beets
Restrictions	See label	Not to be used with products containing cypermethrin and zeta-cypermethrin during a crop season
