

Hero[®] Controls A Multitude Of Pecan Insect Pests

PRODUCT ATTRIBUTES	BENEFITS
Broad spectrum control	Control key pecan insect pests with one product.
Quicker knockdown	Quick knockdown means you stop damage before pests cut into profits.
Longer residual control	Helps reduce the numbers of times you need to spray.
Label information	Caution signal word. Restricted entry interval (REI) 12 hours. No phytotoxicity to crops. Excellent crop safety.

APPLICATION RECOMMENDATIONS

- Use 10.3 oz/acre for insect control in Pecans.
- Thorough spray coverage of plant foliage is essential for optimum control. Use a minimum of 10 gal/acre for application by air.
- Apply ground applications in 200 gallons water per acre for dilute sprays. Use 50 gallons per acre for concentrate sprays.
- Preharvest interval is 21 days.
- Do not make spray applications less than 15 days apart.
