Dear Stallion Insecticide Customer:

This letter is intended to provide additional information FMC is implementing to ensure that workers are adequately protected during the current growing season when using Stallion Insecticide (EPA Reg. No. 279-9545). The product currently in the channels of trade includes use directions which, while approved by EPA, did not include mandatory label language required for all chlorpyrifos-containing agricultural use products. A revised label correcting the omission has been reviewed and approved by the Agency (and is attached). The Agricultural Use Requirements Box on the current packaging label includes the required posting and notification of workers statement, however the text below does not appear on the product currently in the channels of trade.

“Notify workers of the application by warning them orally and by posting warning signs at entrances to treated areas”

The EPA has also required the inclusion of the statement “Not for Use on Horses” with the product name, Stallion Insecticide, to avoid the improper use of the product on uses not approved by the Agency. Not all product in the channels of trade currently includes this statement. Please be advised that Stallion Insecticide (Not for Use on Horses) is approved for the agricultural uses identified in the Directions for Use section of the label and cannot be used on horses.

FMC requests that this information be communicated to your customers this growing season to ensure that workers are adequately protected when using the product.

Should you have additional questions, please contact us at 1-800-231-5808.
